Foreword

Earthen Hues is a company born out of our passion.

Passion to improve our Earth.

Passion to put sustainability first.

Passion born out of a will to lead and influence change, towards a balanced living with nature.

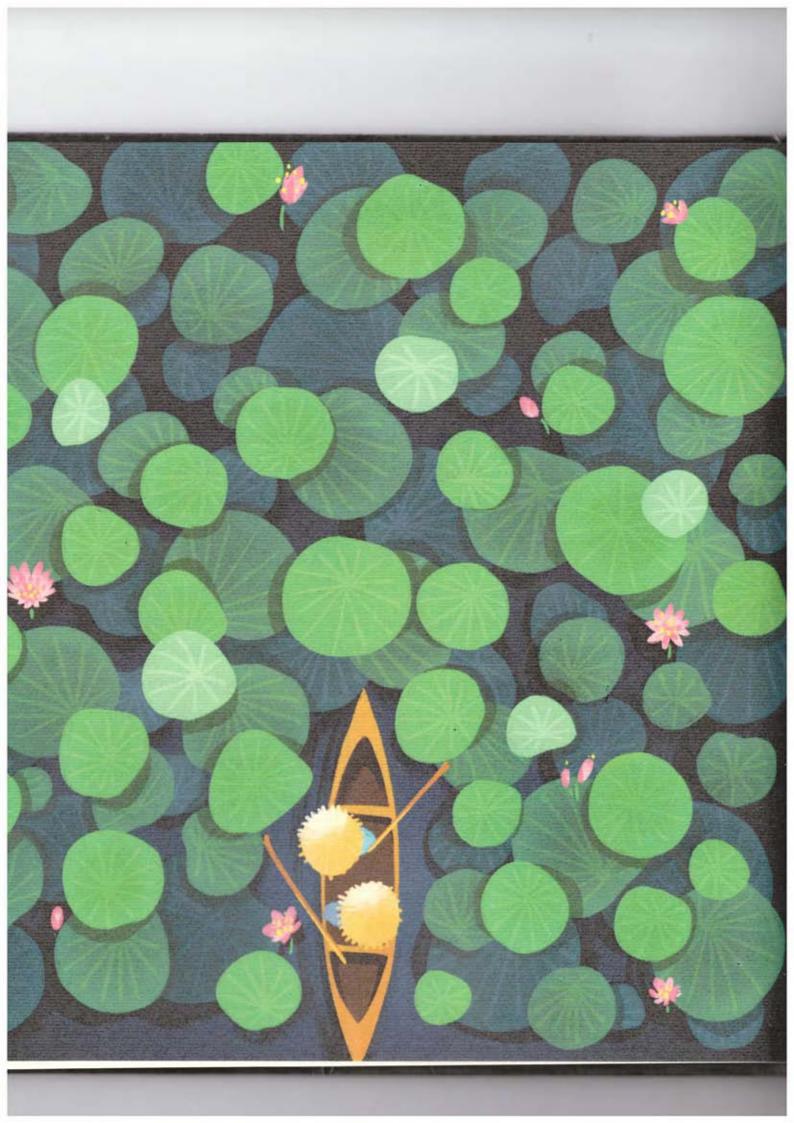

Earthen Hues proudly presents to you our premium sustainable living based real estate project in North of Bangalore.

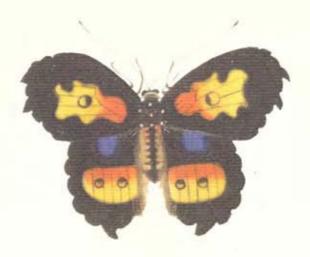

FOREST IN MY BACKYARD.

We believe we all have a part to protect our earth. Sustainable living is not a choice. It's something we do every day even when no one's watching. Our projects are our humble tribute to mother earth. At earthen hues we take care of our soil, water & bio flora. We plant native forests. We build communes where like minded people; who chose to tread the earth lightly come together.

"All know the way But few actually walk it Come lets walk hand in hand"

This coffee table book is a tribute to the power of an individual and what an individual can do to change the world.

To the bold and the fearless

To the people who walked alone

To the believers and the doers

Who save the world one tree at a time!

"The greatest threat to our planet is the belief that someone else will save it"
-Robert Swain

A Tribute:

Wangari Mathai

The first African woman to win a Nobel Peace Prize for her life work and planting more than 30 million trees in 30 years

Daripalli Ramaiah

Everyday of his life he would start his day on a bicycle in a small village in Reddipalle. Wherever he finds a barren patch, he dismounts and plants saplings. Single-handedly he has planted well over 10 million trees that come to one tree for every third resident of Telengana.

"A speak for the trees, for the trees have no Tongues."
-Dr. Seuss

Saalumarada Thimmakka

110 year old; she started her life as a child labourer at the age of 10 years. In her society she drew flak for being childless and even tried committing sucicide when she was 40 years old. She along with her husband turned to planting trees and nurturing as her own children. She planted around 400 Giant Banyan trees on a 4 km stretch along the highway from Hulkul to Kudur (Karnataka) and about 8000 other trees. She received Padmashree for her efforts in 2019.

Jadav Payeng

The Forest man of India. Jadav began planting trees on a barren sandbar of the river Brahmaputra, turning it into a forest, now called Molai Forest after hivm. The forest is spread across 1,360 acres of land and now houses Bengal tiger, Indian Rhinoceros, deer, rabbit, monkeys and several bird species. He himself lives in a small hut with his 3 children and wife in the forest. He was awarded the Padmashree in 2015.

"The world is changed by your example and not your opinion."
-Paulo Coelho

Radhakrishnan Nair

Mr. RK Nair has planted 40 forests with 500,000 trees across seven states, including Rajasthan, Gujarat, Bengal, and Chhattisgarh using the Miyawaki technique; He was awarded a doctorate from International Peace University of Germany.

Akira Miyawaki

A giant among mankind, Akira Miyawaki, a botanist and environmental warrior, was involved in the planting of over 40 million native trees, to contribute to international forest regeneration. His methodology promotes regeneration of native forest, mimicking closely "old world forests" which are dense 4 layered forests, thereby helping speed forest cycle.

wondered why somebody didn't do something about that, then I realised I am sombody"

-Liby Tomlin

M. Yoganathan

The bus conductor-turned-eco activist from Chennai who has planted around one lakh tree saplings across Tamil Nadu.

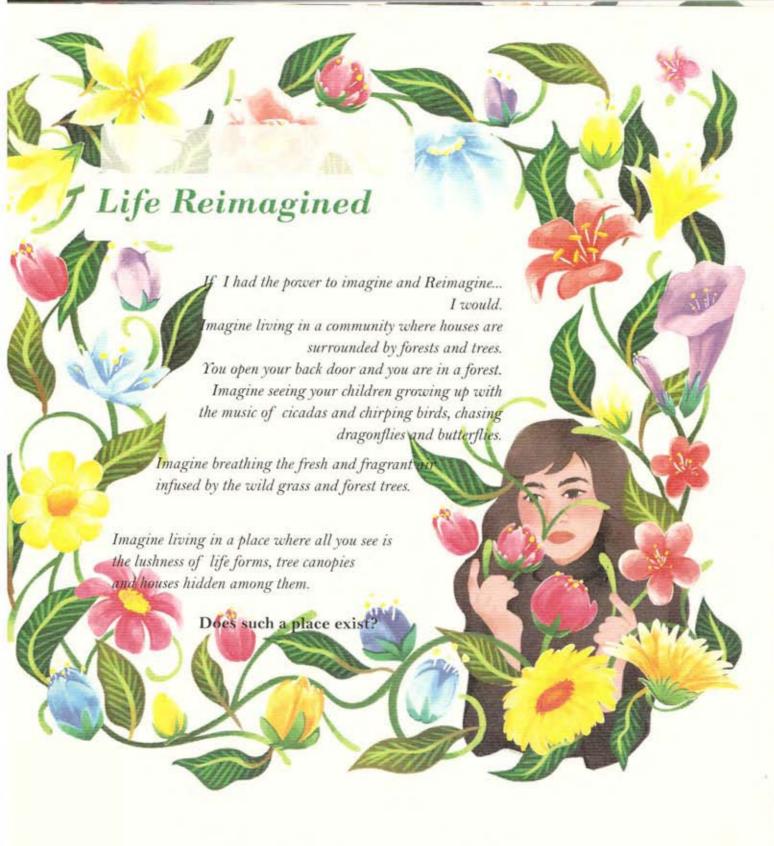

Kallen Pokkudan

The late environmental activist from Kerala is known as the protector of mangrove forests and is reported to have planted over one lakh mangrove plants all over the state.

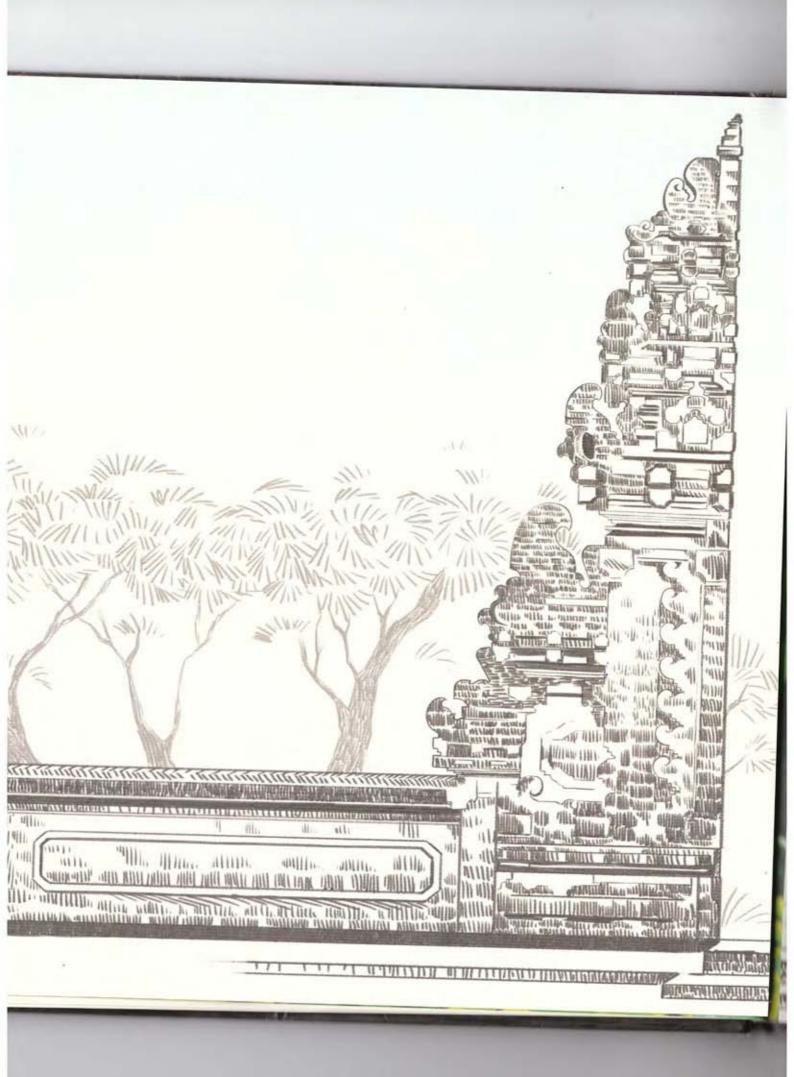

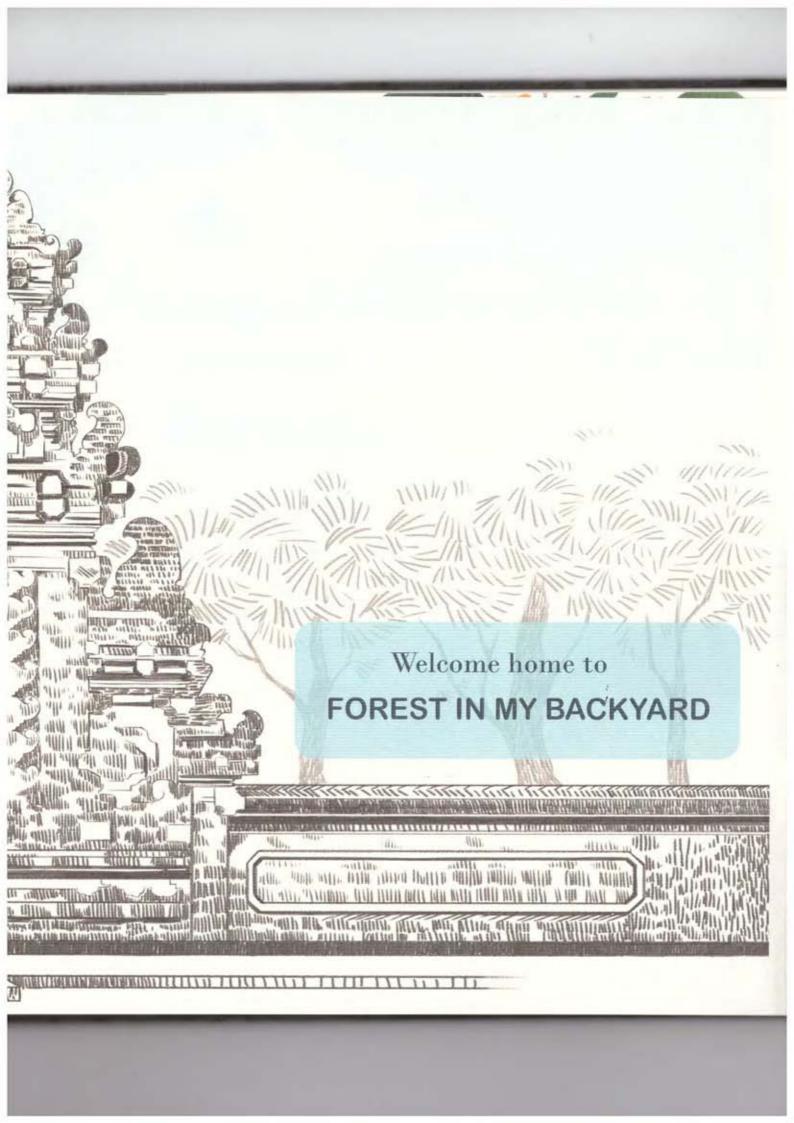

People who are crazy enough to think they can change the world are the ones who do"
-Steve Jobs

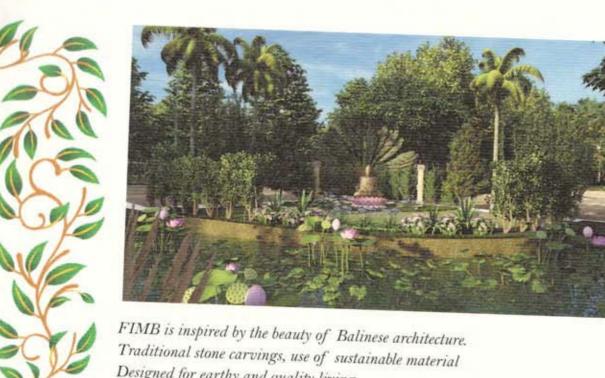

"Only from the heart can you touch the sky"
-Rumi

Architecture @ FIMB

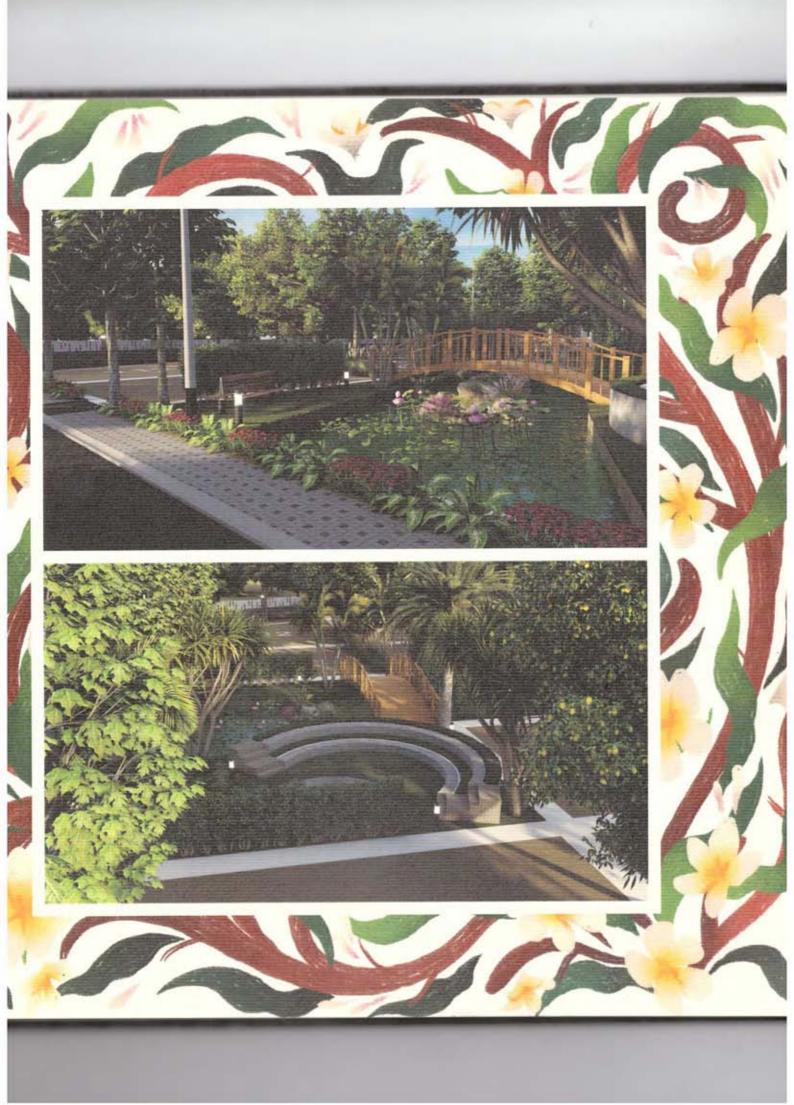

Designed for earthy and quality living.

The little details where everything has a meaning. A sensible architecture which allows an exchange with the natural environment.

Life at FIMB will be a breeze.

Entrance Arch @ FIMB Inspired by Gates of Heaven, Bali

"Look deep into nature, and then you will understand everything better."

- Albert Einstein

Water @ FIMB

At the Forest in my Backyard, we think differently. We want to conserve and sustain the cycle of life.

By speaking to the best brains and sustainable warriors we have realized that sustainability is not a tick box with a rain water harvesting pit or following minimal guidelines prescribed by development authorities.

Hence we have gone beyond the minimum as our aspiration is 'MAXIMUM' on sustainability.

Our rain water harvesting principles are inspired by "Bhungroo" (means straw) which is an Indian innovation that has received global recognition at the UN climate change conference; Bhungroo (in Gujarati: straw or hollow pipe) filters, injects and stores storm water subsoil. It has 17 technical designs for a variety of agro-climatic zones and can be customized based on 27 variables. The technique maximises water retention and penetration in the sub soil layer.

This we know is great, but we don't stop here the minutest detail of how land topography and gradient can be channelized so that the forest creates the suction and enables the cycle of life 'Water'.

"The water cycle of the life cycle are one."

il @FIMB

life giving; It sustains us, captures provides a home to billions of ms.

often we are taught to think of it as

result 1/3 rd of world's soil is ied or dead, and the remaining 2/3 rd · Earth's soil is going through the ication.

ly hope for our planet is if we pledge k this cycle.

At FIMB we treat Earth with respect and support Save the Soil Foundation.

Our landscaping and foresting techniques are built on rigorous experience of working with nature.

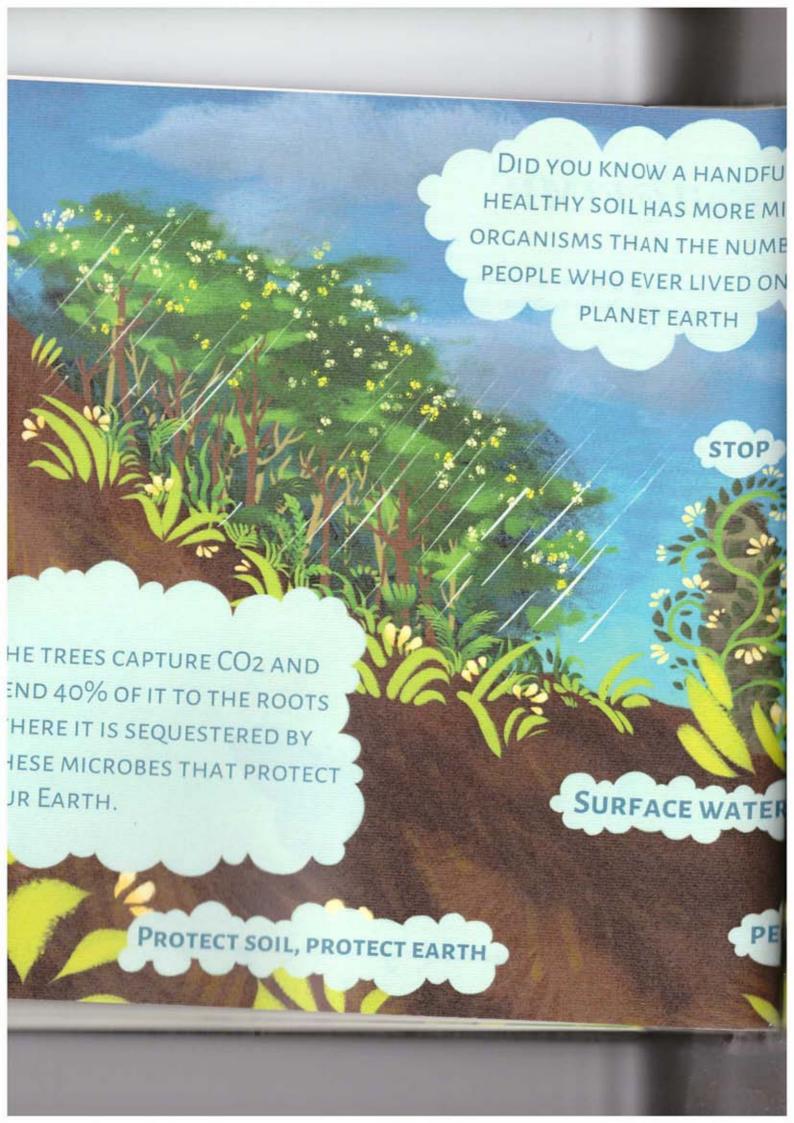

Composting organic wastes, dry leaves and using sustainable landscape practices.

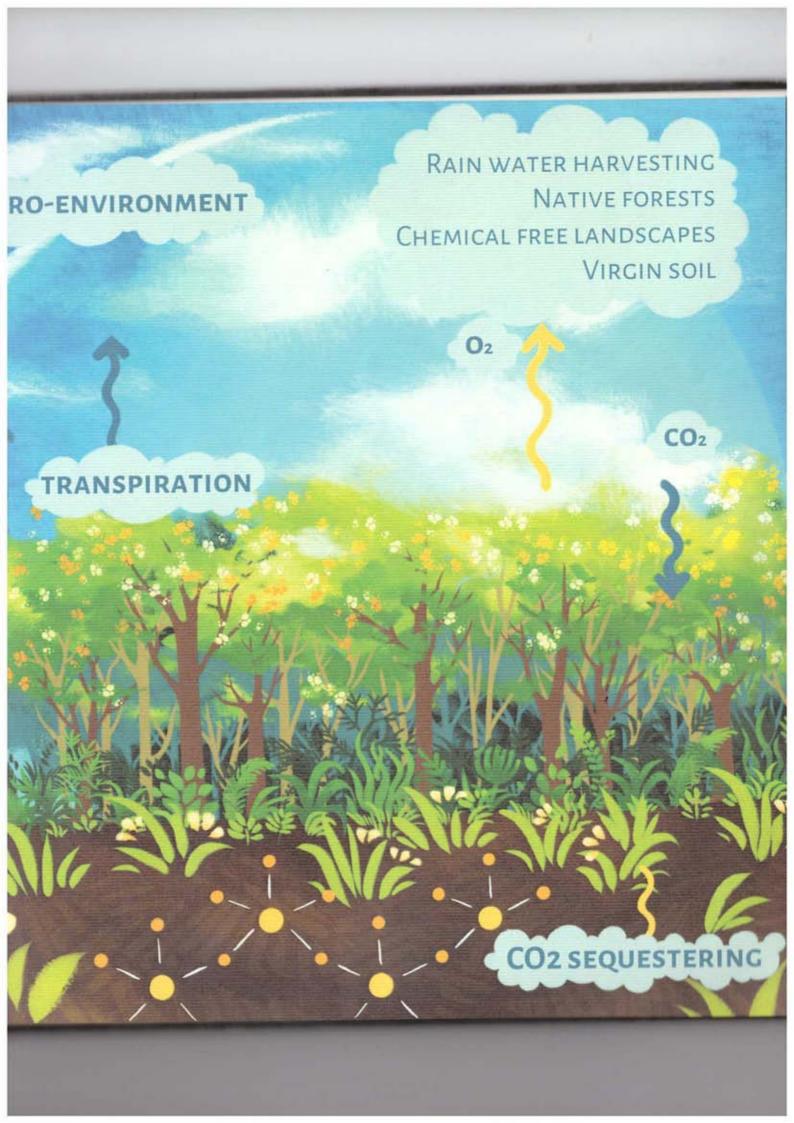

Our policy is 0% Chemicals, Pesticides and chemical fertilizers.

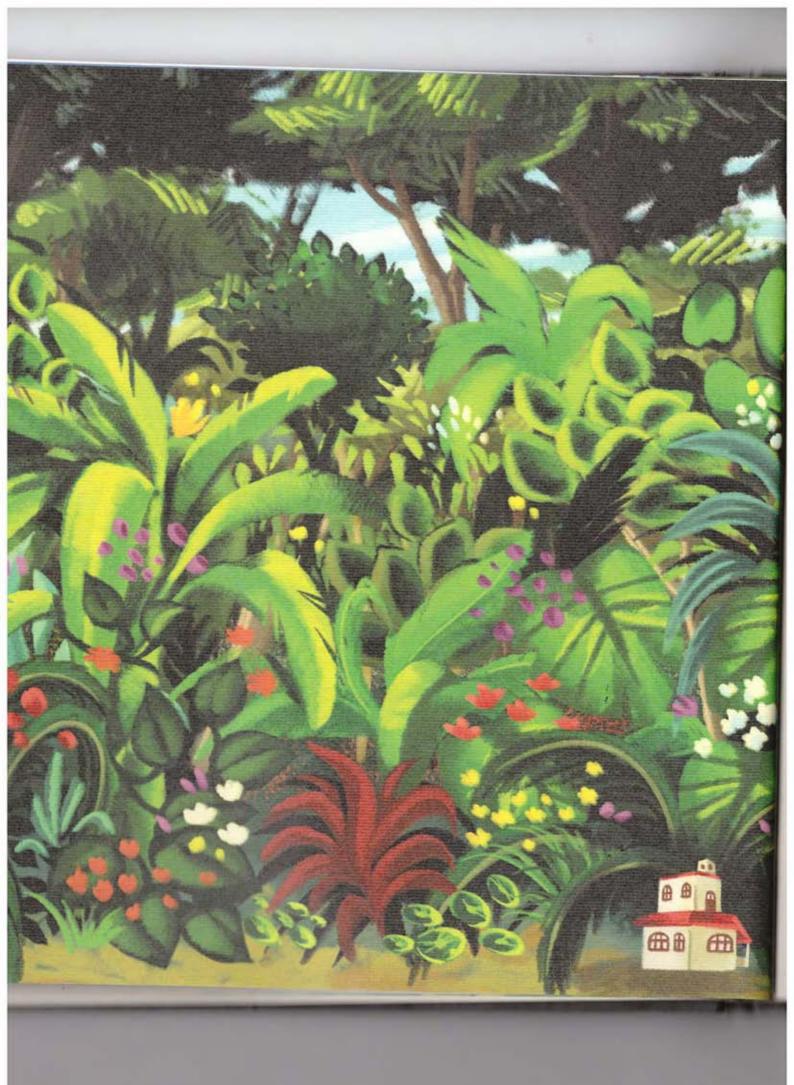

Let's save our Earth, let's protect our soil.

"A nation that destroys its soil, destroys itself."
-FDR

Forest @FIMB

With a forest in your backyard, sprawling lush tropical landscapes swaying in the breeze, creating a light and shadow play.

Living at FIMB will be how life is supposed to be lived, amidst nature.

Our Forestation is inspired by the Japanese Botanist Akiro Miyawaki who is one of the most uspirational green warrior of our planet. Miyawaki technique is a proven and scientific technique f developing "old growth" forest or forest Primeval of indigenous trees species. Typically if we let rature run its course, an old growth forest can take anywhere between 500 to 1200 years, if left indisturbed. The old growth forest has unique flora, fauna, distribution, soil physiology and biome.

These forests are typified with 4 layers; with indigenous tall, sky reaching varieties called the canopy rees followed by large trees, sub trees and shrubs in unique ratio. Reformulated soil becomes the foundation. The result is a dense, impenetrable forest which grows 10X faster than normally planted trees.

Imagine Living in a 100 year forest in 10 years from now.

he little things that citizens do. That's what will make the difference. My little thing is planting trees."
